

Amendment to the SpecificationPage 2, lines 17-19:

In ~~accord~~ accordance with the invention, a manifold for antifreeze coolant is provided by a manifold structure that also defines a reactant gas manifold.

Page 4, lines 1-9:

The manifold structures 27-30 contact sealant material 35-38 which may be any plastic or elastomeric material, such as a silicone rubber that is compatible with the environment of the PEM cell. The sealant material 35, 36, shown more clearly in Fig. 3, covers the corner edges of the fuel cell stack 7 and also extends between and around all of the protrusions 12, 13, as shown in Fig. 3, so that when the manifold structures 27, 28 are held tightly against the fuel cell stack 17, the coolant manifolds 17, 20 will be totally sealed from the fuel cells 8 by the sealant material 35, 36.
